## Additional Information

---

## Hydrolysed marine collagen is rich in amino acids

The collagen we use comes from fish. A recent study (J Agric Food Chem 55(4) 1532-1535 (2007)) has shown the body assimilates collagen sourced from the sea rather than from other sources such as from pigs more easily. The collagen we use has undergone a unique process in which it is broken down into tiny fragments, so that the body can easily absorb them.

## The quality of the shark cartilage

The shark cartilage we use for this product has a high percentage of chondroitin (10%) and glucosamine (17%).

## Magnesium and calcium in citrate form

Oseogen® joint capsules contain essential minerals such as calcium and magnesium. We have added these in their citrate forms.
