Food supplements should not be used as a substitute for a varied and balanced diet and a healthy lifestyle. Do not exceed the expressly recommended daily dose. Keep out of the reach of little kids. Store in a cool, dry place. Once opened, keep the product in the fridge. It contains gluten.

Additional Information

Used in form of Dry Extract

In our product we use dry extracts instead of pulverized plant. The extract presentation allows us to concentrate the product therefore we get the same outcome using less quantity. The dry extracts that we have incorporated in our formulation are:

- California Poppy, with a ratio of 4:1, which means that 200 mg of plant have been used to get 50 mg of our extract.
- Oat, with a ratio of 10:1, which means that 300 mg of plant have been used to get 30 mg of our

extract.

- Lime Blossom, with a ratio of 5:1, which means that 125 mg of plant have been used to get 25 mg of our extract.

The name "dry extract" is referred to a specific extration process where key active ingredients are kept, and impurities and other sustances without any purpose are removed. The use of dry extract has several advantages in opposition to the use of pulverized plant:

- The active ingredient content can be known precisely (standarized extract)
- The products based on plant extracts are more concentrated than those made on the basis of the total plant powder (concentrated and easy to take doses).
- Assimilation of the active ingredients alone is easier than assimilation of all compounds of a plant.

Standarized Extracts

Another important advantage in our formulation is the use of standarized extracts, which means that the plant provides active ingredients (also named plant strength) that are constant over time. In case of our product is tritated in:

- Protropin: 0,1 mg/day
- Rutin: 0,25 mg/day

Allergens

Our products are manufactured so that there is no contamination with any of the most common allergens, except for gluten .
